

PART I

Paper ARC02

Archaeology in Action

Course Co-ordinator

Cameron Petrie

Lecturers

Rachel Ballantyne, Natasha Dodwell, Corinne Duhig, Charly French, Susanne Hakenbeck, Martin Jones, Preston Miracle, Philip Nigst, Tamsin O'Connell, Roger Palmer, Cameron Petrie, & David Redhouse

Structure

Lectures: 1 x 1 hour each week (Michaelmas & Lent terms)

Practicals: 1 x 2 hour each week (Michaelmas & Lent terms)

Supervisions: 8 supervisions (4 in Michaelmas & 4 in Lent)

Fieldwork: 4 days (in Easter)

Mode of examination

Assessed written work: 30% of the final mark

Final written paper: 70% of the final mark

Aims of the course:

ARC02: Archaeology in Action uses taught lectures, practicals, fieldtrips and fieldwork to give a comprehensive introduction to the methods and practices involved in archaeological field and lab research. The sessions have been structured to give you a systematic overview of archaeological field research on the ground (and from the air), including approaches to surveying and mapping landscapes, the reconstruction of the environment, and the investigation of human life-ways in settlements in the past. It also introduces the work that takes place after excavation, particularly the investigation of time and dating, and looking at the analysis of different types of artefacts, including material culture of various types, plant remains, animal remains and human remains. All of these sessions highlight the relationship between the work that archaeologists carry out in the field and the work that they carry out in the laboratory, with the whole being framed around a discussion of the types of questions that archaeologists are interested in, and how they go about answering them.

Learning outcomes:

On the successful completion of **ARC02: Archaeology in Action** students will be able produce high quality written work that demonstrates an informed and critical understanding of a range of key archaeological concepts, and themes, the underlying premises and applications of different archaeological methods, and the way that archaeologists address questions by using combinations of analytical techniques and interpretative approaches.

Assessed coursework:

<i>Task</i>	<i>Weight</i>	<i>Due</i>
01. Mapping exercise	10%	Mich 05/12/14
02. Stratigraphy and dating exercise (1000 words + images)	10%	Lent 23/01/15
03. Practical workbook	10%	East 24/04/15

All assessed work must be handed in to Natasha Martindale (Archaeology Division secretary) by 12 noon on the due date.

Paper Arch02 Timetable 2012-2013

Michaelmas

Module lecturers: Charly French [CAIF], Tamsin O'Connell [TO'C], Roger Palmer [RP], Cameron Petrie [CAP], David Redhouse [DIR], Sean Taylor [ST]

Wednesday 8 October – Introduction to Part I HSPS, 10am Arts School Room A, New Museums Site

Mondays: 12 noon South Lecture Room

Michaelmas 2014

Archaeology in the field

Lecture 1. 13 October 2014

Archaeology in Action: an introduction

CAP

This lecture will introduce ARC02. It will outline the scope and diversity of the discipline of archaeology and its investigation of the human past and introduce you to the practices and principles of archaeology fieldwork that will be covered in the course.

Reading:

Carver 2009

Renfrew and Bahn 2012

Drewett 2011

Scarre (ed.) 2013 (also 2006, 2009)

Grant *et al.* 2008

Practical 1. 17 October 2014

Excavation field trip I

CAIF/CAP

For this introductory practical we will visit the *Cambridge Archaeology Unit (CAU)* and the extensive archaeological site of Over, Cambridgeshire (*Fig. 1*), which has been investigated for more than 25 years by the CAU and members of staff from the Division of Archaeology. The fieldtrip to Over will give you a basic introduction to modern archaeological field research, including some of the key elements of a particular type of archaeological excavation ('developer funded archaeology'), drawing attention to some of its realities, benefits and disadvantages.

Reading:

http://www-teaching.arch.cam.ac.uk/courses/1213/a10_Materials_for_ask_01.zip

Lecture 2. 20 October 2014

What is left behind?

CAP

This lecture will introduce the range of archaeological evidence that is preserved (and that which isn't) and how it makes up the archaeological record. It will also introduce you to the key concepts that will be explored in the course, including archaeological stratigraphy, taphonomic processes, and preservation, and how these factors constrain the evidence that we have for past activities will be emphasised.

Reading:

Carver 2009

Grant *et al.* 2008

Drewett 2011

Renfrew and Bahn 2012, Chapters 2 & 3

Practical 2. 24 October 2014

Archaeology from aerial images

RP

This session will introduce how, why and which archaeological features can be detected from the air and from satellites and will show how photo interpretation allows these to be used in research and to provide a guide for field work.

Reading:

<http://www.univie.ac.at/Luftbildarchiv/>

Palmer and Cowley 2010

Beck 2006

Renfrew and Bahn 2012, Chapter 3

Brophy and Cowley (ed) 2005

Riley 1982

Crutchley 2010

Stoertz 1997

Opitz and Cowley (eds) 2013

Wilson 1982/2000

Palmer 1996

Wilson 1987

Lecture 3. 27 October 2014

Reconstructing the environment

CAIF

This lecture introduces various approaches used to investigate landscapes, as well as some of the problems and biases involved. A review of basic methodological techniques is set out, backed up by case studies from the East Anglian fenlands, south-eastern Spain and Cranborne Chase.

Reading:

Bell and Walker 1992	Evans and O'Connor 1999*
Brown 1997	French 2003*
Chapman 1990	French <i>et al.</i> 2007
Clark 1990	Flannery 1976
Coles and Hall 1994	Hall 1987
Dimbleby 1986	Kenward 1978
Dimbleby and Evans 1979	Plog <i>et al.</i> 1978
Edwards 1982	Rapp and Hill 1998*

Practical 3. 31 October 2014

Sampling landscapes and environments

CAIF

The session will introduce the ways that archaeologists investigate and sample the palaeo-environment, and explore the types of questions that these data can address.

Reading:

Ayala and French 2005	English Heritage 2007*
Campbell <i>et al.</i> 2011*	French 2003*, Chapters 5, 10 & 12
English Heritage 2004*	French <i>et al.</i> 2007

Lecture 4. 03 November 2014

Finding sites: archaeological survey

CAP

Archaeological sites and remains come in many shapes and forms, and this lecture will introduce you to the diverse types of sites, and the methods that archaeologists use to identify sites and examine them before conducting excavation. It will also introduce a range of methodological approaches and the concept of sampling.

Reading:

Bintliff *et al.* 2007

Orton 2000

Carver 2009, Chapters 4 & 5

Parcak 2009

Gaffney and Gater 2004

Plog *et al.* 1978

Howard 2007

Wilkinson 2001

Practical 4. 07 November 2014

Mapping in archaeology: intro to GIS I (IT lab)

DIR/CAP

This lecture will introduce Geographical Information Systems, how they work and why archaeologists make use of them. Examples will move from simplistic applications to more complicated data interrogation and modelling. The practical will orient students in the use of ArcGIS and the production of basic maps.

Reading:

Wright 1988

Lecture 5. 10 November 2014

Living in ancient landscapes

CAP

This lecture discusses the nature of space, place and landscape as both physical and cognitive phenomena. It relates these concepts to human perception and highlights that archaeological data is inherently spatial and considers different theoretical and practical approaches to spatial data at various scales.

Reading:

Bender 1993

Ingold 2000

David and Thomas (eds) 2008

Tilley 1994

Hirsch and O'Hanlon 1995

Ucko and Layton 1999

Hodder and Orton 1976

Wilkinson 2003

Ingold 1993

Practical 5. 14 November 2014

Mapping in archaeology: intro to GIS II (IT)

DIR/CAP

This lecture will expand the skills learned in the Introduction to GIS I session.

Reading:

Gaffney and Stancic 1991

Wright 1988

Lecture 6. 17 November 2014

Stratigraphy and context

CAP

This lecture will focus on the nature of archaeological stratigraphy and will explore the importance of context. It will also highlight practical methods of excavating and recording stratigraphic information and introduce you to a range of sampling techniques.

Reading:

Carver 2009, Chapters 6 & 10

Harris 1989

Grant et al. Chapter 7

Renfrew and Bahn 2012, Chapters 3 & 5

Practical 6. 21 November 2014
Recording artefacts (Keyser Room)
CAP

This session will introduce students to the methods used to record artefacts and to draw artefacts and pottery using the traditional tools of pen and paper. It is complemented by the computing practicals that introduce students to raster and vector illustration.

Reading:

Atkins and Atkins 1989 (also 2010)

Steiner 2005

Griffiths et al. 1990

Lecture 7. 24 November 2014
Living in ancient settlements
CAP

This lecture will introduce you to the range of evidence that can be recovered from ancient (and modern) settlements. It will introduce the concept of the assemblage, methods for site phasing, and for understanding site status and function, and explore how the data derived from complex settlement sites can be interrogated

Reading:

Carver 2009, Chapters 6 & 9

Loveluck 2007

Clarke 1972

Lucy *et al.* 2009

Grant et al. Chapter 7

Renfrew and Bahn 2012, Chapters 3 & 5

Hastorf 1991

Stone 1987

Practical 7. 28 November 2014
Excavation field trip II
CAIF/CAP

For this second fieldtrip we will visit the CAU excavations at West Cambridge.

Lecture 8. 01 December 2014

Thinking about time and dating

TO'C

This lecture will outline the basic principles of scientific dating techniques, discussing the utility of the different methods, the sample types used and the date ranges spanned. The questions of accuracy, precision and errors will be discussed. No prior scientific knowledge required!

Reading:

Aitken 1990, Chapters on climatic dating, 14C, U-series, luminescence, ESR and amino acid racemization.

Brothwell and Pollard 2004, Section 1 Dating: Overview chapter by REM Hedges

Carver 2009, Chapter 11

Taylor and Aitken 1997, chapters on climatic dating, 14C, U-series, luminescence, ESR and amino acid racemization

Practical 8. 05 December 2014

Measuring time

TO'C/CAP

This session will introduce students to the practicalities of scientific dating, particularly the concept of decay, and will provide a practical demonstration of how decay takes place and how scientists can use this to measure time. Students will also be given an exercise that brings together the skills and knowledge learned about time and dating in the different practicals they have attended so far in the course.

Reading:

Bronk Ramsey 2009

Brothwell and Pollard 2004, section on dating, particularly chapters by Hedges (overview), Taylor (radiocarbon) and Latham (U-series)

Renfrew and Bahn 2012, Chapter 12

Stuiver and Reimer 1977

Wheeler 1954

Lent 2015

Archaeology in the lab

Lecture 9. 19 January 2015

Learning from making CAP

One of the most informative ways to learn about and understand ancient technologies and processes is through experimental reconstruction. This lecture will introduce the principles and practices of experimental archaeology.

Reading:

Ashbee and Jewell 1998

Rye 1981

Bell *et al.* 1996

Stone and Planel 1999

Practical 9. 23 January 2015

Making things CAP

This session will introduce students to the methods and technological approaches used to produce pottery vessels and other things out of clay. In addition to a broad introduction to the fundamental processes involved, this is a hands-on session where students get a feel for clay as a raw material.

Reading:

Orton *et al.* 1993

Rye 1981

Rice 1987

Stone and Planel 1999

Lecture 10. 26 January 2015

Technology, economy and pottery

CAP

This lecture will introduce archaeological approaches to pottery. It will explore the types of information that can be derived about ancient technology and economics from looking at pottery fragments, and outline the types of methods that archaeologists use in the field to examine pottery.

Reading:

Orton *et al.* 1993

Rice 1987

Miller 2009, chapter 4

Rye 1981

Practical 10. 30 January 2015

Looking at pottery

CAP

This session introduces students to the types of ceramic material that are recovered by archaeologists in the field and give them an opportunity to have some hands-on experience with the ways that this material is sorted, processed, and analysed.

Reading:

Gibson and Woods 1997

Rice 1987

Orton *et al.* 1993

Rye 1981

Miller 2009, chapter 4

Lecture 11. 02 February 2015

Cognition, technology and lithics

PN

This lecture will introduce you to different approaches to lithics artefacts and consider particular questions that can be answered by analysing lithic assemblages. Lithics can be used to address problems like the organisation of mobility and technology, occupation duration, site formation, organisation of prehistoric trade, etc.

Reading:

Andrefsky 2005

Odell 2004

Odell 2000

Schick and Toth 1993

Odell 2001

Practical 11. 06 February 2015

Learning from lithics

PN

This session will introduce students to stone tool technology and give them an opportunity to have some hands-on experience with lithics and instruction in the types of methods used to sort, process and analyse lithic material.

Reading:

Addington 1986

Odell 2004

Andrefsky 2005

Whittaker 1994

Lecture 12. 09 February 2015

Materials and molecules

TO'C

The methods of archaeological science have expanded the range and depth of questions that can be asked of the archaeological record. Increasingly, archaeological science is not only applied in a post-hoc manner but is used to inform and direct the research design and excavation process. Thus, an understanding of its approaches, possibilities and methods is crucial for all archaeologists. The lecture takes a brief look at the historical development of the different facets of archaeological science, and then focuses on the questions that can be addressed using its methods. It briefly covers the main artefacts and ecofacts that are recovered during excavation. Using ceramics as a case study, it will outline the ways that archaeological and scientific techniques can be combined to investigate particular categories of artefacts.

Reading:

Brothwell and Pollard 2001, intro sections to Sections 3, 4, 5, 6, 8

Practical 12. 13 February 2015

Under the microscope

TO'C/CAP

This session will introduce students to the range of microscopic techniques used in analysis of different categories of archaeological material and assemblages. Students will use low and high power microscopes, as well as scanning electron microscopy to examine a range of archaeological samples.

Reading:

Brothwell and Pollard 2001

Malainey 2012

Lecture 13. 16 February 2015

From subsistence to globalisation: investigating plant remains

MKJ

This lecture will consider the four principal categories of macroscopic preservation of food remains, wet, dry, burnt and mineralised, the different combinations that are found in archaeological sites, the kinds of analyses that are conducted upon them, and how this informs different kinds of field methods.

Reading:

Brothwell and Pollard 2001, section 5

Pearsall 1989

Jones 2007

Wilkinson and Stevens 2003, section 3

Practical 13. 20 February 2015

What plant is this? Archaeobotany in the laboratory

RB

This session introduces students to the range of botanical remains that can be recovered from archaeological contexts, gives them an opportunity to have some hands-on experience with various types of botanical material and explores the ways in which these data can be used to reconstruct the past.

Reading:

Campbell *et al.* 2011

Hather 1993

Evans and O'Connor 1999

Hillman 1984

Lecture 14. 23 February 2015

From kill off patterns to butchery and ritual: investigating animal remains

PTM

In this lecture we consider the particular problems and opportunities presented by the recovery and analysis of animal remains from archaeological sites. Animal remains can address the essential questions of any archaeological "Who-dunnit" - who, what, when, where, and why?

Reading:

Bunn and Kroll 1986

Miracle and Milner 2002

Davis 1987

O'Connor 2000

Gaudzinski and Roebroeks 2000

O'Day et al. 2004

Practical 14. 27 February 2015

Sorting the sheep from the goats: analysing animal remains

PTM

Students will be introduced to the types of animal remains that are preserved in the archaeological record, give them an opportunity to have some hands-on experience with the approaches used by zooarchaeologists, and the types of questions that animal bones can be used to investigate.

Reading:

Davis 1987

Reitz and Wing 2008

Hillson 1996

Schmid 1972

O'Connor 2000

Lecture 15. 02 March 2015**The archaeology of death and burial****SH**

Do the dead have to be buried? Do we have to bury the dead? Is burial part of what makes us human? This lecture will introduce mortuary archaeology as a central component of the discipline of archaeology. It will give an account of the way in which archaeologists have in the past thought about funerary evidence, and it will provide an overview over some contemporary theoretical approaches.

Reading:

Ariès 1981	Pader 1982
Binford 1971.	Parker Pearson 1982
Bradley 2002	Parker Pearson 1999
Chapman 2003	PAHO/WHO 2004
Chamberlain and Parker Pearson 2001	Rak <i>et al.</i> 1994

Nilsson Stutz 2008	Tarlow 1999

Practical 15. 06 March 2015**Analysing human remains I****CD/ND**

This session will introduce the skills of human osteology: basic anatomy and physiology of the hard tissues, the preparation of a skeletal inventory and determination of the 'Big Four' of demography, and recording of pathological changes. Excavation and handling of human remains is covered and the ethical aspects of osteoarchaeology are considered.

Reading:

This is the basic reading list. The volumes by Mays, and White and Folkens are the essential textbooks, the latter dealing with anatomy and identification as well as interpretation. These classes are supported by a handout and textbooks are provided, but it is worth reading at least the introductions to the books below and skimming through to see the different ways in which basic osteological recording and analysis can be done.

Bass 1987

Brothwell 1981

Iscan and Kennedy 1994

Larsen 1997

Mays 1998

Ortner and Putschar 1985

Steele and Bramblett 1988

Ubelaker 1989

White and Folkens 2000

Lecture 16. 09 March 2014

Living and dead bodies: scientific approaches

SH

The application of scientific techniques, such as osteology, palaeopathology and isotope analysis, to the study of human remains has greatly expanded what we can say about people's lives in the past. In combination with other archaeological evidence, such as burial practice and grave goods, they can open a window into people's circumstances, from childhood to death. This lecture will explore the way in which these techniques have changed and expanded our thinking about the social role of past dietary and subsistence practices and about population movements in the past.

Practical 16. 13 March 2015

Analysing human remains II

CD/ND

This session will expand on the analysis of the human body begun in Analysing Human Bones I. The skeletal remains are put in the context of cultural and

environmental factors (funerary archaeology and taphonomy) and methods of comparison are suggested.

Easter 2015

Archaeological Fieldwork

Students will participate in the Division of Archaeology training excavation. Students are expected to attend 5 full days on-site, which can be made up of several half-day sessions.
